

I am in the early stages of wireframing a website that will have a number of personal coaching tools. (I have 9 in the pipeline)

I want the tools to be beautiful, fluid, intuitive. Whilst I see the website being used primarily as a desktop application, clearly I want it to be usable on mobile – which might be in locked landscape mode.

At this stage I want to beta 2 interactive tools/pages, to tests out the functionality and get customer feedback on them.

Page 1:

Contains "cards" in a 9 x 9 grid with different words on each card

Drag the cards around the grid and they reorder themselves

The top row is shaded differently

You can drag a copy of any card into one of six available “spaces” in a triangle

You can move the cards to different spaces in the triangle

You can remove a card from the triangle and “return” it to the main grid

When you refresh the page, it goes back to the start

Page 2:

Contains about 40 images that you can lay on top of each other

You can drag and drop each image around certain parts of the screen

You can drag and drop an image into a specified area of the screen – and this highlights the image differently

You can then pop-out the specified area to take up the whole screen

When you refresh the page, it goes back to the start

Tool 1: Values - Concept

How would it do this?

- When first land on the page, “instructions on use” is in middle of page overlaying grid
- Press triangle to slide instructions to left of the page)
- Bulk of screen is a grid of personal values (scroll up and down the page)
- Able to drag (click on a rectangle and move to a new position. Grid automatically re-orders)
- Use prompt questions to drag top 9 values into the top row.
- Top row is highlighted somehow (border / shadow / other means?)
- Once selected 9 values, prioritise them by dragging copies of 6 of them into the triangle
- Able to reorder or remove them in the triangle as required (remove by “dropping” them back in the main group)
- Have the triangle using to screen shot or emailed to you (low priority)

Purpose: To help identify personal values

Instructions on use

- 1. Look through the 9 x 9 grid of personal values
- 2. Drag those most important to you onto the top row
- 3. Ask yourself the prompt questions to crystallise your choices
- 4. When you are ready – drag your prioritised values into the triangle
- 5. If you want – have your values emailed to you
- 6. Click a value below to start

Help Prompt Questions

- 1. When do you go out of your way to do something?
(what value are you fulfilling?)
- 1. When do you get irritated/angry/frustrated?
(what value is not being met?)
- 1. When are you in flow?
(what value is being met?)

Value	Values		Value		Value			Value
Value	Values					Value		
	Values	Value		Value				
Value	Values	My own description					Value	

Static content

Static content – that you could press and then go away into a sidebar?

Instructions and prompt questions

a pop-up that you could keep on the screen to help you

Can move them within the triangle
Or remove them entirely by “dragging them back into the grid”

My Top Values

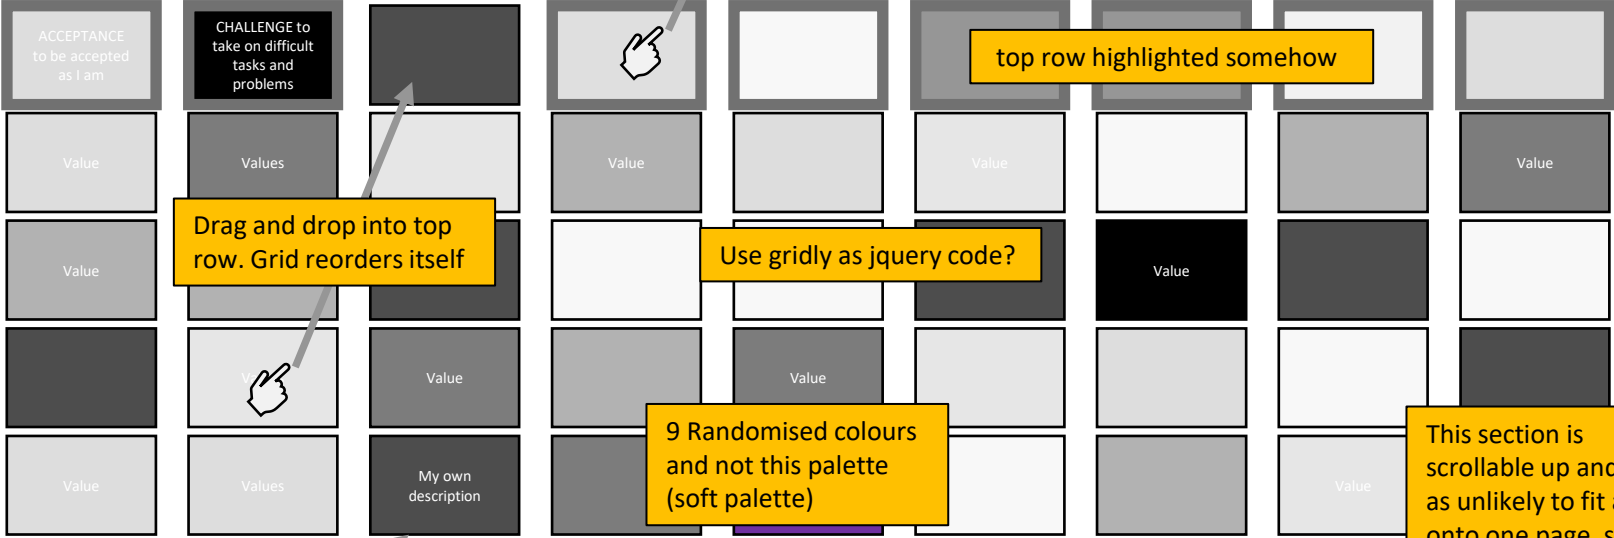

Press photo / mail button to email a .pdf file of the values pyramid

Drag and drop a copy into pyramid

If user returns to the page – it will reset itself

Your Top 9

top row highlighted somehow

Drag and drop into top row. Grid reorders itself

Use gridly as jquery code?

9 Randomised colours and not this palette (soft palette)

9 x 9 grid

Low priority: Can add 2-3 blanks cards with my own description

This section is scrollable up and down as unlikely to fit all onto one page, so you have to “search” for the values

Some of the code I have found to explain the type of thing I am looking for...

Example Code	To do what?
https://zavoloklom.github.io/material-design-hierarchical-display/	When someone lands on the page – and read the “instructions” – could ask “Are you ready to find your values?” – and then this code makes the 9 x 9 grid appear
https://www.jqueryscript.net/demo/Responsive-Fluid-Drag-and-Drop-Grid-Layout-with-jQuery-gridstack-js/	How I expect the user to be able to drag their selected values into the top row (example 1)
https://www.jqueryscript.net/demo/Dynamic-Drag-Drop-Grid-Layout-Plugin-With-jQuery-Gridly/	How I expect the user to be able to drag their selected values into the top row (example 2)
https://www.jqueryscript.net/demo/Touch-friendly-Drag-Drop-Plugin-With-jQuery-drag-drop-plugin-js/	Example of drag and drop – (i.e. when the drop into the pyramid shape – but leave the copy of the value in the main 9x9 grid)
https://www.jqueryscript.net/demo/Easy-Drag-and-Drop-Plugin-For-jQuery-dad-js/	Examples of drag and drops – that looks like you could use to get them drag and drop in the pyramid shape

Tool 2: Charms Selector - Concept

What happens?

- Land on the page – there is a “pile of pictures” at the bottom of the page and instructions
- The pictures might be lying on top of each other
- User click on one of them and the instructions move to a bar on the left
- User can drag images to spread them out around the screen
- They can order them, move them, overlay them
- And when ready - drag as many or as few onto the parchment of discovery (at the top of the screen)
- When they move to the parchment area:
 - they are removed from the main section
 - Perhaps the pictures get a shadow (see shadow jquery code)
 - Perhaps when the cursor is over the parchment area - the cursor sparkles (see jquery code)
- Press pop-out button so that the parchment covers the whole screen (so the other images are not visible)
- Once finished using them – press the email button to get a .pdf image emailed or screenshot (low priority).
- Once you refresh the page – it resets itself

Instructions on use

1. Spread the pictures out around the screen
2. Explore each one
3. You might want to group them
4. When you are ready – drag the ones that have most meaning onto the canvas
5. the canvas will appear when you click on a picture

When you click on an image, the instructions move to a sidebar and a canvas is revealed (see next slide)

Canvas or luxury cloth =
discovery space

Press mail button to email a
.pdf file of the values pyramid

When you drag them onto the space –
they might have a shadow or go
brighter or the mouse sparkles

And you can then enlarge – which
takes the whole screen – so that the
focus is on the discovery space and
nothing else

Drag them onto your discovery space, they
disappear from the working space)

You can drag and drop them around
the working space so that you can see
them all or group them

This is the “working space”
